

June 1st 2018 in Tokyo
The second time “IIC & IVI joint workshop”
IIC & IVI sharing use case information

Condition Monitoring and Predictive Maintenance Testbed

Kazunari Okada (岡田一成)

Sr. Technical Marketing Manager

ISO 18436-2 Vibration Analyst (CAT II)

National Instruments Corporation Japan

「予期せぬ運転停止や劣悪な保守計画によつて、世界の装置産業にかかるコストは年間総生産の5%、毎年200億ドルに上ります」

“Unscheduled shutdowns, coupled with poor maintenance practices, cost global process industries 5% of total production annually, equivalent to \$20B each year.”

—Hydrocarbon Publishing Company

Why condition monitoring is necessary?

売上増

Increase Revenue

- Increase uptime and service offerings
 - Optimize asset maintenance activity
-

コスト削減

Reduce Costs

- Reduce warranty repair costs
 - Increase MTBF
 - Reduce frequency of unscheduled downtime
 - Optimize the workforce
-

リスク削減と安全性向上

Reduce Risk
and Increase Safety

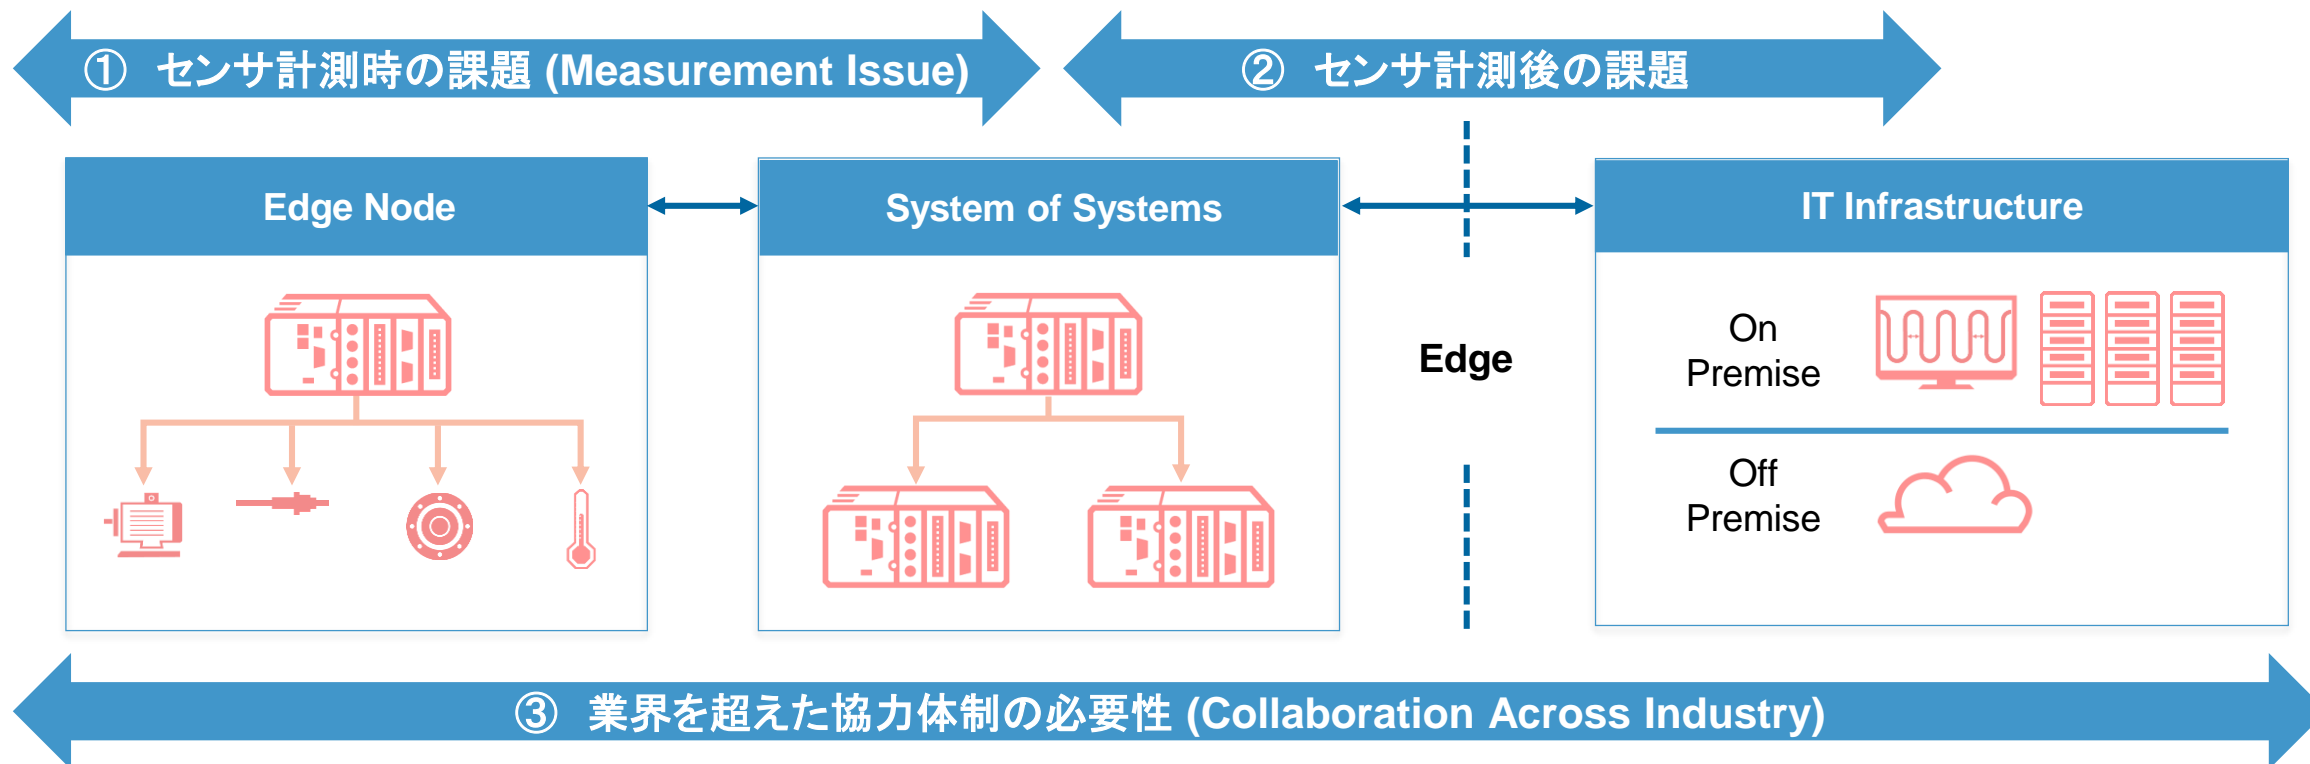

- Reduce worker contact with dangerous machines/environments
- Prevent catastrophic failure and unscheduled outages

予知保全システム構築時の課題

Issues in building predictive maintenance system

- Edge Computing of Large amount of Sensor Data
- Time Sync. between Various Sensor Measurements

- Data Visualization & Analysis

- IT System
- IT & OT Integration (SI firms are necessary)
- Data Analytics Partners

How do we address our challenges?

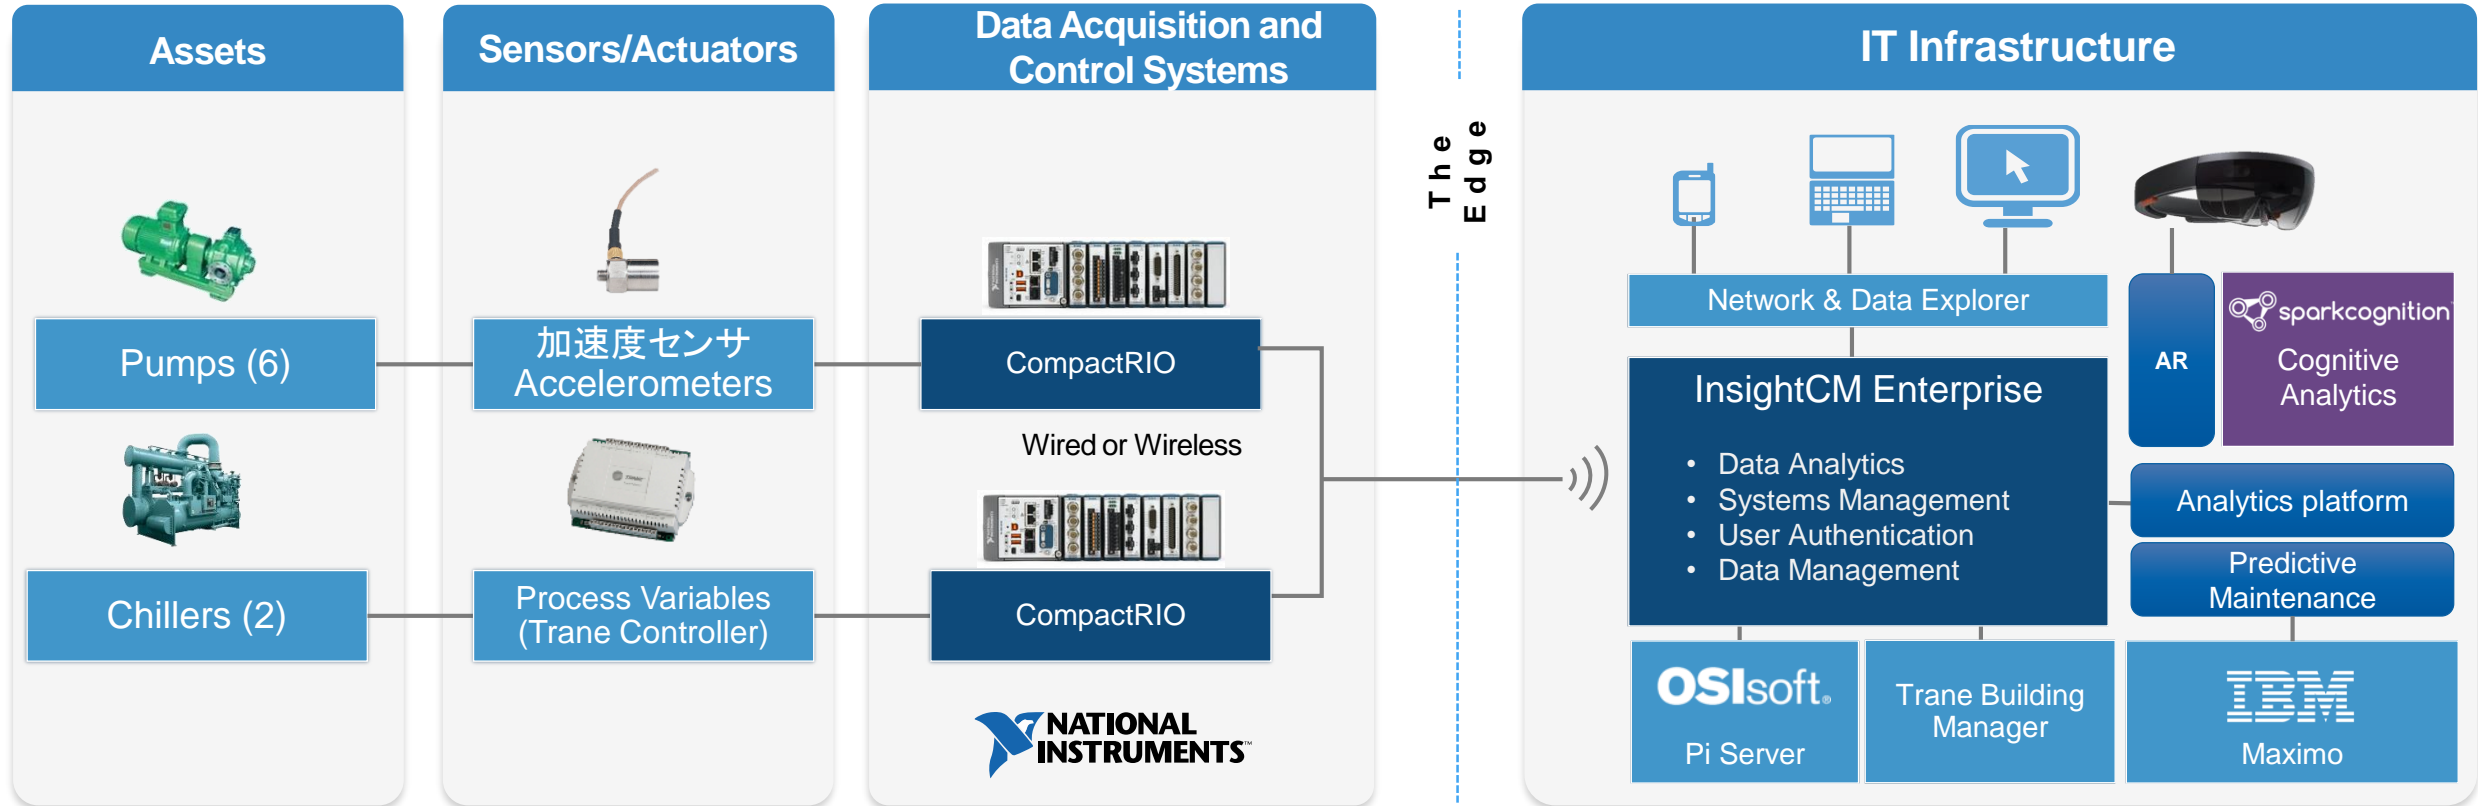

OPEN PLATFORM

- ✓ 計測精度が保てるのか？
- ✓ 各種プロトコルへの対応は？
- ✓ データフォーマットをどうすべきか？
- ✓ 将来の拡張性は？
- ✓ セキュリティーは？
- etc.

- ✓ Measurement Quality?
- ✓ Flexible communication protocols?
- ✓ Common data file formats?
- ✓ Future-proof architecture?
- ✓ Security?
- etc.

Condition Monitoring and Predictive Maintenance Testbed

Solution Architecture

Prototype Deployed to a Relevant Environment

NI InsightCM installed at NI Headquarters (Austin, TX)

Panel

Cable reduction
box

Sensors

Assets (chilled
water pump &
motor)

NI InsightCM Monitoring Devices

Live prototype available online at:

Use Cases

Project Smart Generation

Customer Profile

- Large power generation in US
- 50+ GW Fossil Generation Capacity

80+

Sites

10,000

Assets to Monitor

30,000

Sensors

60,000

Manual Rounds/Month
for Data Collection

Business Need

- Increase Revenue: Increase uptime and service offerings, and optimize asset maintenance activity.
- Reduce Costs: Reduce warranty repair costs, frequency of unscheduled downtime, and optimize the workforce.
- Increase Safety: Reduce worker exposure to dangerous machines/environments.
- Reduce Risk: Prevent catastrophic failure and unscheduled outages.

Challenge: Better leverage new technologies to address increasing reliability demands and workforce optimization.

1. Aging plants with critical equipment at end-of-life

2. Scarcity of specialists

3. Inefficient workforce utilization, 80% Data Collection, 20% Analysis

Business Need

- Increase Revenue: Increase uptime and service offerings, and optimize asset maintenance activity.
- Reduce Costs: Reduce warranty repair costs, frequency of unscheduled downtime, and optimize the workforce.
- Increase Safety: Reduce worker exposure to dangerous machines/environments.
- Reduce Risk: Prevent catastrophic failure and unscheduled outages.

Challenge: Leverage IIoT technologies to make older assets smart.

1. Aging assets with limited data

2. Scarcity of specialists

3. Connectivity with existing systems
